SALIVA ID KIT

The Rapid Stain Identification Saliva Kit's sensitivity (less than 1 μ l, 0.000036 oz) and specificity (double monoclonal antibody against salivary α amylase), provide a tool that

can identify the presence of saliva from bottles, cans, or from rape victims. The kit will not cross-react with other bodily fluids and will detect the presence of human saliva from a variety of commonly tested materials. **Independent Forensics 866-434-2400 or www.ifi-test.com**
